1 Meet for Tea | Synergy

WE see if we can work well together

We assess the compatibility of our views, goals, and personalities and the suitability of my approach to your project. We will not be discussing any design options for your project.

2 R.A.D. Study™ | Vision and Feasibility

YOU show me your vision; I show you what's possible

We ensure that I understand your requirements and that you understand both the limitations and opportunities available

3 Deep Blue Design™ | Solution

WE evaluate the possibilities and develop a solution

We follow my 25-step development and review process to create a design based on INTERIOR, PSYCHOLOGICAL, EXTERIOR, ENVIRONMENTAL, LONGEVITY, and COST-EFFECTIVE principles.

4 HARDEN | Documentation:

I prepare bulletproof technical documents

a comprehensive package to avoid guesswork or misinterpretation and to help ensure that the completed building performs optimally. Drawings are developed from highly-detailed virtual model of the building, and I include scannable links

5 Assemble and Evaluate | Build

I assist you and the builder through the construction process

I remain involved in the project to review the construction progress until it is complete and you have moved in. With my system, builders can access a virtual walkthrough of the building during construction; this minimizes confusion and delays and improves coordination to give you a better finished product.
